RE: North Harvard Widening Project

Dear Resident:

The Village of Addison and the Village of Villa Park will be jointly completing roadway improvements on Harvard Avenue. The limits of the improvements are from Armitage south to the dead end. The Villa Park portion of the project includes resurfacing of the existing pavement, widening of the roadway by approximately three feet, and other related work.

Some construction operations, including delivery of traffic control, installation of erosion control barriers, and removal of curb and gutter have already begun. Upon completion of the concrete work, grinding and widening of the pavement will be the next steps in the process. The street will have a rough surface and motorists should take caution while driving. Following the completion of any necessary pavement patching and widening, the contractor will place a final surface layer of asphalt.

Traffic should be relatively unhindered throughout the project. There may, however, be a need for temporary road closures, especially on days when grinding or paving of the roadway are taking place. Residents may temporarily park on Yale Avenue, where permitted, while construction activities prevent access to their property.

The general contractor for this project is G & M Cement Construction, Inc. of Addison, Illinois. All questions and comments regarding this project should be directed to the Village of Villa Park Engineering Division at (630) 834-8505. We thank you in advance for your patience throughout the course of this project. If you have any questions or would like additional information, please do not hesitate to contact us.
